

You will write both the method under test and the two test methods. Both the test methods should pass (have a green sign). You must look at the expected outcome and figure out what the method under test needs to do ("do," in the area marked "code goes here.")

Method under test:

```
public static string Formatter(string firstName, string lastName)
{
    [code goes here]
}
```

Test methods:

Test1

firstName: "nathaniel"

lastName: "haWthorNe"

expected outcome: "#_Hawthorne, Nathaniel (HAWNAT)"

actual outcome: Formatter(firstName, lastName)

Test2

firstName: "ELisabeth"

lastName: "GEorge"

expected outcome: "#_George, Elisabeth (GEOELI)"

actual outcome: Formatter(firstName, lastName)
